

Solder Hot Air Station

Nova Code: **SOL-201**

- Automatically removes static to safeguard components.
- Microcomputer to display temperature and to control temperature.
- Temperatures rises rapidly and stays constant when desired temperature is reached.
- Circumrotating fans, creates gentle airflow.
- High power efficiency has a unique “auto-sleep” function. When handle is placed on the handle fixture the temperature will drop to its lowest level and the solder station will activate “sleep” mode. The temperature will return to desired temperature within 6 seconds once handle is lifted.
